SAP EWM

>360° Logistics Suite for SAP

New requirements for logistics

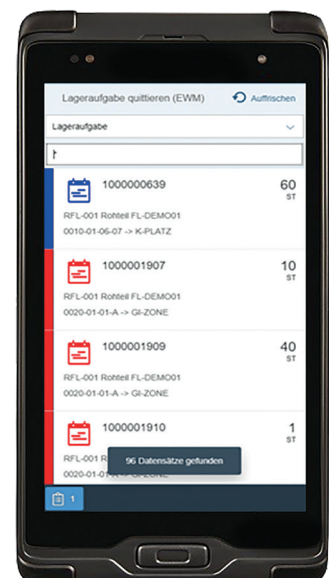

New requirements in manufacturing entail adjustments in warehouse structures. Thus, the introduction of a warehouse management system or the adaptation of the existing IT infrastructure is recommended for the efficient management of inventories. The SAP partner Flexus relies on warehouse management with SAP® to make processes more transparent and productive.

Within the framework of SAP® Warehouse Management, not only warehouse positions of the various materials and articles in high-bay warehouses or small parts warehouses are managed, but also the complete processes along the supply chain. This enables you to control and monitor all goods movements within the warehouse - in order to achieve a transparent material flow to achieve.

EWM – the new logistics solution from SAP®

EWM (Extended Warehouse Management), the new warehouse module from SAP®, is the strategic successor to the SAP software WM (Warehouse Management). Compared to its predecessor SAP WM, SAP EWM has a much wider range of functions - for you this means: more possibilities to map your own process flows in the standard.

When EWM is in use, integration with other SAP SCM (Supply Chain Management) products, such as SAP TM (Transportation Management) or SAP Yard Logistics, is also possible. It is also possible to customize the handling of orders with complex cross-docking processes and the detailed execution of special packing and shipping logics. In addition, there is the option of using SAP EWM as an integrated solution in SAP ERP and SAP S/4HANA for warehouse and storage areas of any size and process requirement.
