Comprehensive automation	Individual process optimization	Competent, individual Support	Fast, simple Implementation	Full integration into FlexGuide

Yard Management

Fiori Applications for Registration

Innovative Fiori applications enable mobile pre-registration for drivers. Required information can be entered quickly and easily as well as stored in real time.

In addition, the safety and behavioural instruction can already take place here and the cargo securing check can be completed - saving valuable time and resources. In the end, the driver receives a QR code with which he can start all subsequent process steps.

FlexYard App „Secruity Instruction"

## What functions does FlexYard Management for SAP® offer?

Identity Provider

Automated loading bay planning

Mobile applications

Interactive 2D & 3D Visualization

Gate transaction

Resource planning

Real-time localization of vehicles
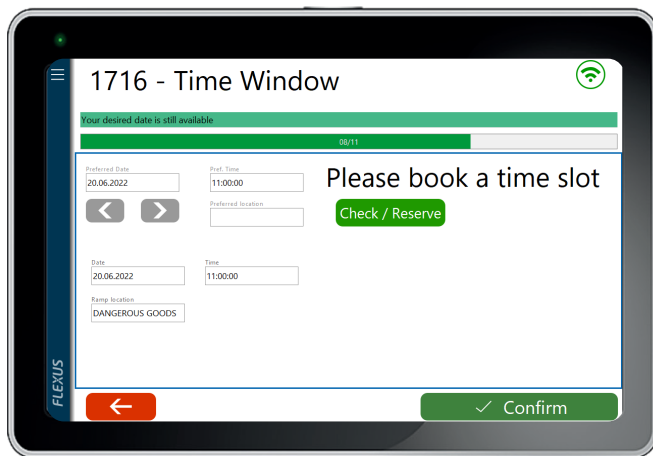

Exception Handling

Automated task generation

### Yard Management for SAP

Time Window Management Tool

With our time window management tool, the complex process of dock scheduling has been simplified and made user-friendly. The carrier or driver can book a time slot that suits them prior to the truck's arrival. The dispatcher then sees which ramps are occupied at which time. Through simple selection, filtering and drag and drop, the transports can then be adjusted.

Central Data Cockpit

The CDC enables the monitoring and control of the plant traffic through integrated tools, such as the 2D/3D control centre or the time window management. Master and transaction data as well as supplier and driver data are clearly listed and displayed. Furthermore, the CDC provides a simple and clear customizing tool for many yard components.
Java applications for operating terminals

For easy control over the terminals, Flexus AG offers a Java application called JMobile Client (JMC), which was developed explicitly for this purpose. With this, the often-confusing SAP standard transactions are displayed graphically and user-friendly.

In addition, customer-specific requirements such as the output of pagers or documents at the terminals can be quickly and easily integrated into the process using the JMC. This enables a simple and precise communication of instructions and data between the driver and the system.
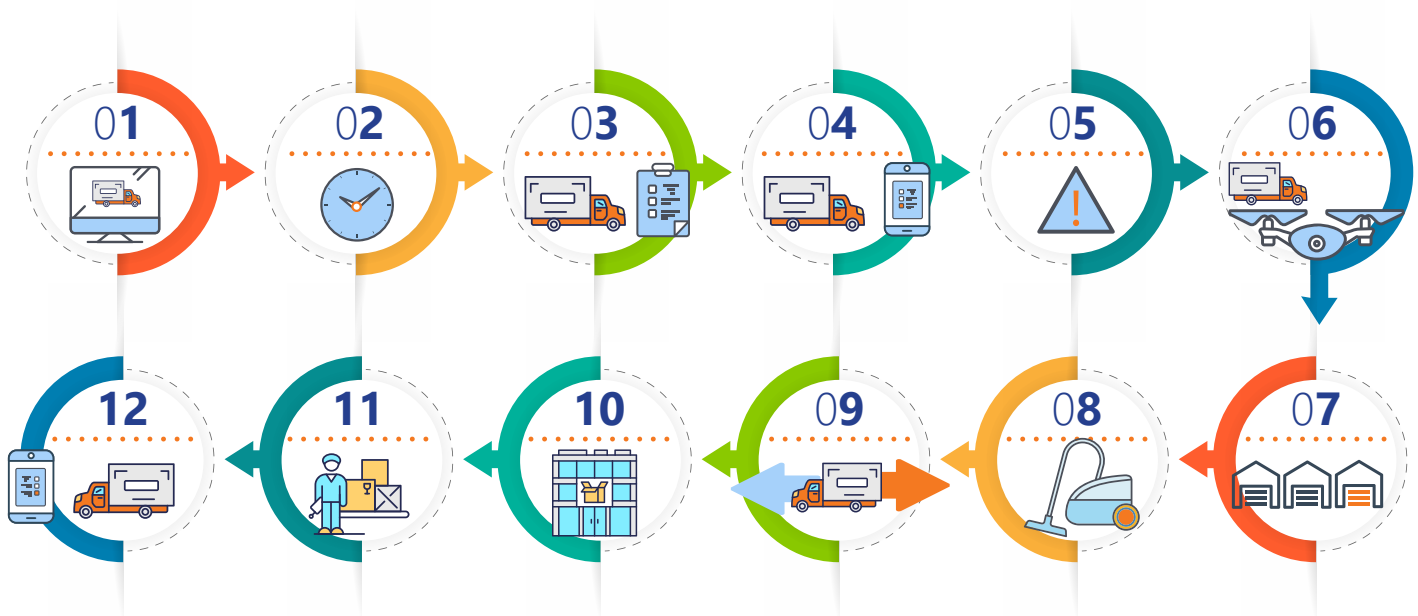

Yard Management

What process steps does FlexYard Management for SAP® offer?

Flexus' fully comprehensive solution covers all yard processes from pre-announcement through gate assignment all the way to checkout.

01 Pre-Announcement	07 Gate assignment
02 Time-Window-Management & Dock Appointment Scheduling	08 Purification
03 Check-In	09 Cross-Docking
04 Self-Check-In	10 Internal flows
05 Safety briefing	11 Customer-specific processes
06 Weighing	12 Check-Out

Yard Management for SAP

Our services: Everything for you - under one roof

From planning to long-term support - Flexus accompanies and supports you the entire way and beyond!

Pre-analysis

Most projects fail because of mistakes in planning. Therefore, careful planning is essential for a successful project completion! We provide you with an individual preliminary consulting and an analysis of your existing processes, future requirements and software. Following this, the required workload will be estimated and a time schedule will be created.

System selection and conception

The choice of the most suitable yard management system significantly influences the scope of the project. Therefore, it should be made with careful consideration! In workshops, we introduce our systems to you, advise you individually and submit a suitable recommendation based on prior analyses. We will then jointly select the system and create a concept that you can ultimately approve.

Changes

Every company is unique. That is why we adapt our systems specifically to your requirements - up to and including customer-specific development! The changes to be made are discussed in workshops. Based on this, our developers customize your specific wishes and test the adapted system.

Implementation

The migration of systems can be stressful! With experience and tranquillity, we accompany you to a successful outcome! After the implementation of the new system and the migration of required legacy data, the joint acceptance takes place. After this, the productive system is launched and the hypercare phase begins. The implementation ends with a successful project completion.

Long-term Support

The journey does not end after project completion! We support you with individual support during operation! Your problems are our problems - that's why we provide you with customized support and a personal contact person who is available for you 16 hours a day, seven days a week!
